OPERATOR'S MANUAL

When using your heat press, basic precautions should always be followed, including the following:

1. Read all instructions.
2. Use heat press only for its intended use.
3. To reduce the risk of electric shock, do not immerse the heat press in water or other liquids.
4. Never pull cord to disconnect from outlet, instead grasp plug and pull to disconnect.
5. Do not allow cord to touch hot surfaces.
6. Allow heat press to cool completely before storing.
7. Do not operate heat press with a damaged cord or if the equipment has been dropped or damaged. To reduce the risk of electric shock, do not disassemble or attempt to repair the heat press. Take it to a qualified service person for examination and repair. Incorrect assembly or repair could increase the risk of fire, electric shock, or injury to persons when the equipment is used.
8. This appliance is not intended for use by persons (including children) with reduced physical, sensory or mental capabilities, or lack of experience and knowledge, unless they have been given supervision or instruction concerning use of the appliance by a person responsible for their safety.
9. Close supervision is necessary for any heat press being used by or near children. Do not leave equipment unattended while connected.
10. Burns can occur when touching hot metal parts.
11. To reduce the likelihood of circuit overload, do not operate other high voltage equipment on the same circuit.
12. If an extension cord is necessary, then a 10-ampere rated cord should be used. Cords rated for less amperage may overheat. Care should be taken to arrange the cord so that it cannot be pulled or tripped over.
13. Clean exposed surfaces with a damp cloth to prevent dust build-up, which could lead to overheating.
14. All other maintenance and service should be performed by an authorized service representative.

Operating Instructions

Adjusting Settings

- To avoid burns, do not touch the heated platen during use.
 - Keep hands clear from the heater of the press during heater lock down as the pressure may cause injury.
 - Keep the work area clean, tidy, and free of obstructions. This guide is created with the user in mind. Carefully follow the step-by-step instructions for best results:
1. Connect the power cord into a properly grounded 120-volt/240-volt (for 240-V version) electrical outlet with a minimum 10-amp rating.
 - If used, a minimum 16-gauge 10-amp extension cord is required.
 - Power supply cord must be disconnected before cleaning or servicing press.
2. Turn the Power Switch "ON" located on the back of the heat press. Ensure that the lever arm is not locked, and the heater is completely unclamped (open position).
3. Calibrating the heat press (ONLY if needed):
- Ensure the time/temperature controls are unlocked (refer to section Additional Controller Settings below).
 - Press and hold the left and right buttons together for 3 seconds to open the calibration window displayed on the screen.
 - Use the left knob to adjust the temperature to calibrate and press the left button to save calibration.
 - Press and hold the right button for 3 seconds to lock the settings once calibrated.

Adjusting Settings

Recommended settings vary based on the garment material and type of transfer product used. Please consult the instructions or specifications that came with your transfer product for appropriate temperature and time settings.

Controller Settings

Press and hold the right button for 3 seconds to lock/unlock time/temperature settings. This will help the user avoid unintended changes to the time and temperature during operations.

Press and hold the left button for 3 seconds to toggle between °F and °C.

Temperature is adjusted by rotating the left knob to the desired temperature setting. Temperature can be adjusted in 1°F/1°C increments. Counterclockwise rotation of the left knob increases the temperature.

Time controls the amount of heat transferred to the ink or adhesive. Time is adjusted by rotating the right knob to the desired time setting. Time can be adjusted in 1 sec. increments.

Clockwise rotation of the right knob increases the time.

Pressure is adjusted using the pressure adjustment knob (center spindle), no matter how thick the garment is.

Clockwise rotation of the pressure knob increases the pressure. The pressure adjustment controls pressure from low to high.

Printing with your Heat Press

Unlock the time/temperature settings by pressing and holding the right knob for 3 seconds.

Set the desired temperature and time using the left and right knob respectively.

Press and hold the right knob for 3 seconds to lock the settings.

Once the Heat Press has reached the designated temperature, pull the lower platen out to position the garment on the lower platen, centering the transfer area on the platen for best results.

Operating Instructions

Pull out the lower platen and align the transfer material on the garment to be printed and push in the lower platen all the way.
Pull out the lower platen using the slider to gain access to the garment.

Some transfer products recommend a “pre-press” to heat and flatten the garment before printing. Push the lower platen in all the way and adjust the pressure to desired pressure using the pressure adjustment knob and lower the lever arm until the heater locks into the press position. Lift open the lever arm once “pre-press” is complete.

Lower the lever arm fully until the heater locks into the press position. This will start the countdown and the LED indicator on the top cover will be lit up per the adjusted time. At the end of the heat cycle (when time has elapsed), there will be a sound indicator indicating user to lift open the lever arm.

NOTE: Depending on the transfer product, you may need to peel off the transfer carrier while it is still hot, or it may be necessary to wait until it has cooled before peeling it off.

WARNING: Allow heat press to cool before moving or placing in storage

Wrap the power cord and place it in the cord storage provided on the back side of the heat press.

Ensure that the lever arm is in the locked position, the pressure is adjusted to bare minimum (maintain slight contact between lower platen and heater) and the lower platen is pushed all the way in, before placing the heat press in the box.

To fit the heat press back in its original packaging, lift the heat press (while in locked position) carefully holding the end of the lever arm on the back and lower platen on the front.

NOTE: Be careful to not slide out/open the lower platen or lift open the lever arm while lifting the heat press.

Storage and Transportation

Place the press in the box carefully, ensuring that the press sits on the bottom foam completely.

Slide in the two side foam pieces to hold the heater cover. Place the top foam to cover the heat press and close the box.

NOTE: When the heat press is stored or not in use, adjust the pressure to bare minimum (maintain slight contact between lower platen and heater) to keep the pressure buildup less between parts.

Replacement Part List

ITEM #	PART NAME	PART #	QTY
1	PROJECT 1515 Base	3-1355	1
2	PROJECT 1515 Fin	3-1356	2
3	PROJECT 1515 Cord Cover	3-1357	1

**MACHINERY DIRECTIVE,
ELECTROMAGNETIC COMPATIBILITY DIRECTIVE
ATTESTATION OF CONFORMITY**

Technical file of the company mentioned below has been inspected and audit has been completed successfully.

2006/42/EC Machinery Directive has been and 2014/30/EU Electromagnetic Compatibility has been taken as references for these processes.

Company Name : **Rongxing(Xi'an) Mechanical Technology Co., Ltd**

Company Address : 2nd Floor(Factory), No.9 Building, China Electronics Industrial Park in Xi'an No.1288, 10th Caotan Road, Xi'an Economic and Technological Development district, Xi'an City, Shaanxi Province, China, Zip 710018

Related Directives and Annex : **2006/42/EC Machinery Directive / Annex VIII
2014/30/EU Electromagnetic Compatibility Directive /Annex II**

Related Standards : **EN ISO 12100:2010, EN 60204-1:2018, EN IEC 61000-6-2:2019
EN IEC 61000-6-4:2019, EN 60335-1:2012**

Product Name : **Heat Press Machine**

Report No and Date : **TCF-HYY-21421**

Product Brand/Model/Type : **MM912,MM15**

Certificate Number : **M.2026.206.C139695**

Initial Assessment Date : **29.04.2026**

Registration Date : **30.04.2026**

Reissue Date/No : **-**

Expiry Date : **29.04.2031**

UDEM Uluslararası Belgelendirme
Denetim Eğitim Merkezi
San. ve Tic. A.Ş.
Genel Müdür

The validity of the certificate can be checked through www.udem.com.tr. Upon completion of EC declaration of conformity, it is used solely at the manufacturer's responsibility. This certificate remains the property of UDEM Uluslararası Belgelendirme Denetim Eğitim Merkezi San. ve Tic. A.Ş. to whom it must be returned upon request. The above named firm must keep a copy of this certificate for 15 years from the registration of certificate. This certificate only covers the product(s) stated above and UDEM Uluslararası Belgelendirme Denetim Eğitim Merkezi San. ve Tic. A.Ş. must be noticed in case of any changes on the product(s).
